

### MAY 2000

EPA Region III has worked aggressively to clean up the hazardous waste problems in West Virginia. In cooperation with the West Virginia Division of Environment Protection (WVDEP), cleanup activities have been undertaken at each of the 10 sites identified as having the worst contamination.

More than 130 emergency response actions have been initiated throughout West Virginia to remove immediate threats to public health and the environment.

All of the Superfund sites on the National Priorities List have either undergone or are undergoing cleanup action.

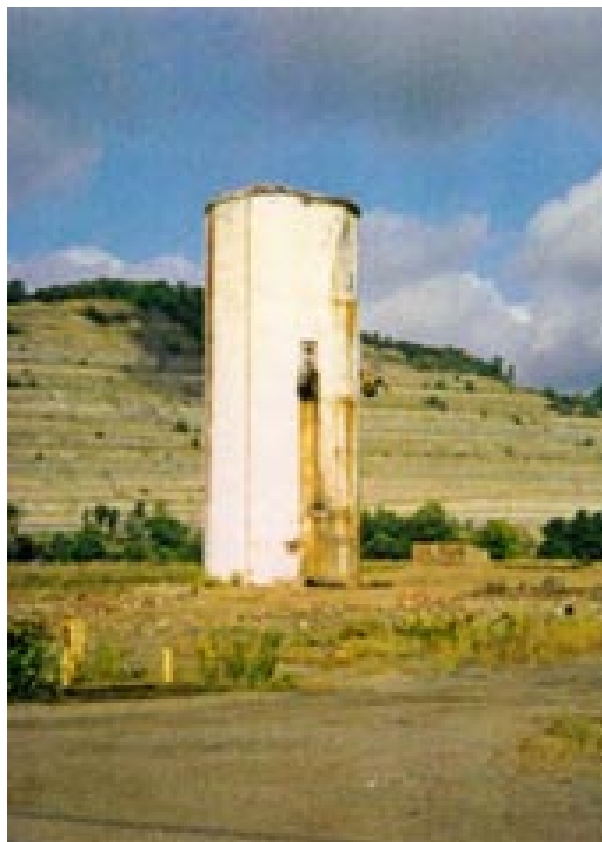

One Superfund site (10%) has all cleanup actions completed.

Three Superfund sites (30%) have cleanup actions underway. EPA Region III has performed an emergency cleanup action at an additional 6 sites (60%).

Final remedies have been chosen for 20% of the Superfund sites on the National Priorities List.

Potentially Responsible Party funding of cleanups has saved taxpayers more than \$206 million to date at sites in West Virginia.

EPA Region III has helped promote economic redevelopment by removing 519 sites from the hazardous site inventory.

Hanlin-Allied-Olin Site, Moundsville: Investigation now underway.
